EDUCATION

DePaul University

Bachelor of Arts in Computer Science, Focus in AI/ML

Chicago, IL

May 2028

EXPERIENCE

Web Development Intern | *HTML, CSS, JavaScript*

June 2026 – Present

Village of Orland Park

Orland Park, IL

- Developed and maintained web applications for municipal government serving **55,000+ residents**, resolving raised website support tickets with a **95% satisfaction rate**
- Collaborated with IT and Marketing departments to deploy event pages for large-scale public events, reducing turnaround time by **65%** for digital event launches
- Led migration of the municipal website to Granicus CMS, transferring content and restructuring data architecture with **zero downtime** during transition

Freelance Web Developer

May 2025 – Present

Novus Beauty

Remote

- Integrated Shopify Checkout API across 6 products using dynamic variant mapping, enabling direct-to-cart purchasing on a live e-commerce platform
- Deployed and debugged production e-commerce functionality via SSH on a Linux server, resolving critical checkout issues and restoring site functionality
- Architected server-side JavaScript routing logic for dynamic cart management, reducing checkout friction and improving conversion flow

Backend Operations

July 2023 – June 2025

Boost Studios

Chicago, IL

- Managed and optimized order queue infrastructure for a live iOS application, reducing order queue times by **70%** while sustaining high-volume transaction processing
- Maintained a **4.7-star** App Store rating across **10,000+ reviews** by resolving customer escalations and support tickets in real time
- Configured queue filtering systems to prioritize and route large-scale orders, increasing operational efficiency across the fulfillment pipeline

PROJECTS

Neeshdle | *React, Node.js, Python, Spotify Web Playback SDK, iTunes Search API*

- Built and deployed a full-stack Heardle-style song-guessing web app with staged snippet reveal, user-configurable difficulty breakpoints, and multiple game modes (daily challenge and chart-based)
- Integrated an LLM to convert plain-language song requests into accurate iTunes Search API queries, cutting song-lookup time from **3 minutes to 30 seconds**
- Engineered audio playback through the Spotify Web Playback SDK with an iTunes preview fallback, and built a persistent lifetime-stats leaderboard for cross-session player tracking

Parallax | *React, Node.js, Supabase, Vercel*

- Developed a trade-copying platform for futures traders using a React frontend and Node.js backend, implementing core trade synchronization logic
- Deployed to Vercel with Supabase database integration, establishing scalable infrastructure for real-time trade execution
- Curated a waitlist of **100+ prospective users** prior to launch, validating market demand for automated trade-copying functionality

TECHNICAL SKILLS

Languages: Python, SQL (Postgres), JavaScript, HTML/CSS, C/C++, R

Frameworks: React, Node.js, Flask, FastAPI

Developer Tools: Git/GitHub, Linux/Ubuntu, VS Code, Postman, Supabase, Vercel

APIs & Libraries: Spotify Web Playback SDK, iTunes Search API, Shopify Checkout API, pandas, Requests
