EDUCATION

DePaul University

Bachelor of Science in Computer Science

Chicago, IL

Expected Graduation: June 2028

Prominent Courses: Data Structures, Computer Networking, Data Analysis, Foundations of Artificial Intelligence

EXPERIENCE

Application Developer Intern | *JavaScript, Python, SQL, REST APIs*

June 2026 – Present

Village of Orland Park

Orland Park, IL

- Built a Python ETL pipeline to migrate **700+ pages** and **1,200+ documents** from the legacy CMS to Granicus, normalizing content into a structured schema and generating **350+ URL redirects** to preserve existing links; completed cutover with **zero downtime**
- Developed a Node.js service that syncs event data from the municipal calendar into templated event pages, reducing launch turnaround by **70%** (2 days → ~14 hours)
- Triaged and resolved **150+** production issues across web forms for a site serving **55,000+ residents**, sustaining a **95%** satisfaction rate; wrote an automated monitoring script that caught **25+** broken links before users did

Software Engineer Intern | *Python, Firebase*

July 2023 – June 2025

Boost Studios

Chicago, IL

- Optimized the order queue pipeline for a live iOS app processing **2,500+ orders/day**, cutting average queue time by **70%** while sustaining high-volume transaction throughput
- Built queue filtering and routing rules to prioritize large-scale orders, reducing fulfillment delays by **85%**
- Investigated and resolved **1,000+** order and payment issues by tracing them through Firebase backend logs, helping sustain a **4.7-star** App Store rating across **10,000+ reviews**

Application Developer | *Python, JavaScript, Node.js, Shopify API, Linux*

May 2025 – Present

Novus Beauty

Remote

- Integrated the Shopify Checkout API across 6 products with dynamic variant mapping, enabling direct-to-cart purchasing on a live e-commerce store and cutting checkout steps by **80%**
- Diagnosed and resolved critical checkout failures in production by debugging over SSH on a Linux server, identifying root cause as app and script bloat and restoring purchase flow within **2 hours**
- Scripted Python services through the Ubuntu terminal to handle order processing and inventory sync, improving performance by **2×**

PROJECTS

Parallax 🌀 | *Node.js, Supabase (PostgreSQL), React, Vercel*

- Built the backend for a futures trade-copying platform, implementing trade synchronization logic that replicates leader trades to follower accounts with **sub-25ms latency** and idempotent execution to prevent duplicate orders
- Designed the PostgreSQL data model in Supabase for accounts, positions, and trade events, and deployed serverless APIs on Vercel using Supabase Realtime for live trade updates
- Launched a waitlist of **100+ prospective traders** pre-launch, validating demand for automated trade copying

Neeshdle 🌀 | *Node.js, Python, React, Supabase, LLM API, Spotify Web Playback SDK, iTunes Search API*

- Built and deployed a full-stack Heardle-style music game with a Node.js backend serving daily-challenge and chart-based modes, staged snippet reveal, and configurable difficulty breakpoints
- Designed an LLM-powered query layer that translates natural-language song requests into structured iTunes Search API calls, reducing song lookup time by **85%** with **94%** match accuracy
- Implemented a resilient audio pipeline with automatic fallback from the Spotify Web Playback SDK to iTunes previews, and built a persistent leaderboard in Supabase tracking lifetime stats across sessions

TECHNICAL SKILLS

Languages: Python, C/C++, Java, SQL (Postgres), JavaScript, HTML/CSS, R

Frameworks: React, Node.js, Express, Flask, FastAPI

Developer Tools: Claude Code, Codex, Git/GitHub, Linux/Ubuntu, Postman, Supabase, Firebase, Vercel, AWS, GCP

APIs & Libraries: Shopify API, Spotify Web Playback SDK, iTunes Search API, REST APIs, WebSockets, pandas
